Ethan Calder, PMP

New York, NY, United States

(917) 555-2244

ethan.calder@fakemail.com

I am a successful engineer and Project Manager with proven interstate pipeline construction, design and integrity management experience, and a strong focus on safety, budget, and schedule. Extensive experience with FERC regulated projects and associated filings, including extensive experience with 49 CFR Parts 192 and 195 and ASME codes. Other experience includes utilities, site development, and hydraulic modeling. Seeking a position with a progressive organization where my skills, experience and education will be utilized to their fullest extent.

Education

University1 -Bachelor of the Sciences in Civil Engineering, May, 1997

University2 -Bachelor of the Arts. Major - English, May, 1988

Experience

Company1 - Project Manager

Responsible for managing and providing engineering support for Pipeline Integrity, Pipeline and Facility Rehab, and In-Line inspection projects for the CO2, Products and Natural Gas business units. Duties include:

Successfully managing CO2 pipeline rehabilitation program including pipeline repair, replacement and recoating projects throughout Texas and New Mexico. This includes the completion of several hundred ILI digs;

Managing and in-house engineering of the successful ILI inspection of over 200 miles of 20" critical phase CO2 pipeline that had not been successfully inspected in the past;

Managing numerous other ILI runs including crack detection, high resolution MFL axial and circumferential tools, geometric assessment and mapping runs

Ensuring that CO2 pipelines meet the regulatory requirements of 49 CFR Part 195 and that all integrity work is compliant with ASME standards.

Completed over 500 rehabilitation digs including the design and installation of multiple type-B sleeves.

Managed West Coast Sleeve Inspection and Replacement Program including Type A-sleeve evaluations, conversions to B-Type sleeves and installation of new Type-B Sleeves

In-fence remediations at Pump and Compressor Station facilities.

Working with Kinder Morgan field offices to ensure compliance with PHMSA and State regulations concerning required inspections, Operator Qualification, Contractor compliance, OSHA compliance and general safety.

Company2 - January 2019-September 2019

I was responsible for managing all pre-construction and construction activities for a series of CFR 149 Parts 195 and 192 regulated pipelines for a confidential client throughout Southeastern Texas. Activities include developing and maintaining construction budgets, selection and management of construction subcontractors, preparing project and construction execution plans, ensuring that safe work practices are understood and followed during construction activities, coordinating third party pipeline crossings, ensuring all permits are complete and in place, and preparing estimates for future work.

Company3 – Project Manager

Responsible for all phases of the following projects including developing estimates and project budgets, creating Project Management Plans and working with Business Development and Field Operations to ensure successful development and/or execution:

Design and construction of an 8-mile refined products pipeline integrity replacement in the Louisiana marshland, including supervising all Federal and State permitting and environmental remediation.

Design and construction of a new shipper connection into CPL's Houston, TX origination terminal including connection into both distillate and gasoline headers.

Distillate reliability project design at CPL's Greensboro, NC station that included installation of a complex bypass around existing can pump and plans for installation of an upgraded pumping system.

Design and construction, with CPL's business partner Texon, of a Biodiesel injection facility at CPL's Greensboro, NC station. Now in-service, it is the largest biodiesel injection facility in the United States.

Complete re-design and automation of CPL's legacy Athens Delivery Facility.

Company4 – Project Manager (one project contract)

Performed front-end engineering design, construction estimate, engineering, compliance specifications, and project schedule for a 100+ mile CO2 Pipeline and Facilities project.

Company5 - Project Manager

As Pipeline Integrity Project Manager I designed and managed the rehabilitation of Chevron USA's Chunchula, AL natural gas sales line including several repairs, investigative digs, and full hydrostatic test of line.

Reviewed and updated Chevron's Land Based Pipeline PHMSA Operations & Maintenance Manual.

Authored Chevron's Pipeline Maintenance and Integrity Manual which allowed non-regulated pipeline assets to be assessed in a similar fashion to PHMSA regulated pipelines covered under the Pipeline Integrity Management program without the assets falling under regulatory umbrellas.

Performed Complete Risk Assessment of Chevron's Main Pass (Gulf of Mexico) 10" crude pipeline.

Managed pipeline integrity program for a mid-continent crude producer including scheduling in-line inspections, determining the types of tools to utilize for inspections, preparing post-assessment dig lists, and preparing annual PHMSA reports.

Worked on estimate and design for subsea crude line smart pig launcher and receiver.

Performed 49 CFR Part 195 and Part 192 review of compliance for various Gulf of Mexico crude oil and natural gas pipelines.

Performed PHMSA Jurisdictional and API RP 80 review of Chevron's on-shore gas gathering systems.

Company6 - -June 2010 -July 2012 – Senior Engineer/Project Manager

As Senior Engineer, designed, estimated, prepared construction scopes of work and contracts, oversaw competitive bid process, specified and procured materials, oversaw budget, ensured

regulatory compliance, managed construction, coordinated commissioning and close out of the following projects:

Relocation and lowering of segment of a major natural gas transmission pipeline in Jackson, MS.

In-Line Inspection Tool (pigging) modification to approximate 20 miles of existing pipeline.

Replacement of a segment of above pipeline under a major highway by directional drill.

In-line Inspection Tool modifications to and hydrostatic test of an existing 20" transmission pipeline.

Construction of pipeline replacement/reroute project through a dense urban area of Jackson, MS including approximately 4.3 miles of high density directional drill including a single bore of 9,222 FT.

Designed, prepared contract documents, bid, and worked with land owners and LA DOTD to obtained required right of way, temporary work space and permits for replacement of a pipeline crossing of a major highway and modifications to the measurement and regulation station at the terminus of the line.

Managed engineering team responsible for Pipeline Integrity Management projects to ensure compliance with 49 CFR Part 192 Subpart O requirements.

Prepared annual PHMSA reports as part of the pipeline integrity Team.

Worked with Pipeline Integrity and Assessment team on completing DOT/PHMSA annual integrity compliance reports.
